GROW IN GOOD COMPANY

Each company in our portfolio has something in common. The future.

Each has broken with convention, imagined the future differently, and developed products and services that reach far beyond accepted norms of performance. As you will see from our portfolio, this thinking has expressed itself in breakthrough materials, in revolutionary processes, in imaginative new services. Roll over the companies here for a brief overview on how they are contributing to that future.

New ground is often best trodden together. Where it is possible and makes sense, we work in coalition with co-investors.

Companies with the future in common

Cleantech companies

CPT

The automotive industry's drive to reduce CO2 emissions is the focus of Controlled Power Technologies. It acquires licensed technologies such as micro-hybrid start-stop systems and exhaust gas energy recovery systems and focuses their potential on this growing need.

d3o

Imagine a material made from intelligent molecules that could flow as you moved, but on shock would lock together to absorb the energy of the impact. That is d3o. Of this material's many applications, the d3o lab is currently working in human body protection.

Exosect

Exosect develops and sells Intelligent Pest Management solutions, giving growers, food producers and processors a cost-effective way to reduce insecticide use. Their ambition is to help growers achieve zero residues in their crops.

FutureE

Modular fuel cell solutions for individual power requirements. FutureE is about customization, flexibility, reliability and durability. The remotely monitored modular plug-and-play system minimizes service requirements.

General Fusion

This Canadian start up is developing relatively low-tech fusion energy technology. General Fusion is applying the latest in material technology and digital signal processing to MTF, a 30 year old approach which had largely been ignored in recent years.

n-tec

The founders of this 2001 start-up use their mix of industrial and academic backgrounds to bring to market high quality carbon nanotubes, carbon cones and related carbon nanomaterials.

TNM

By establishing a national network of intelligent fast and normal chargers, Netherlands based The New Motion offers every electric driver access to a charging network with just one pass. It also provides charging solutions for at home and/or at work.

XEROS

Harnessing over thirty years of research at the University of Leeds, Xeros is the brand name for a patented polymer-based cleaning that dramatically reduces the cost and environmental impact of aqueous wash cleaning.

Zeroshift Ltd

Focused on performance in all senses, this is the world's most advanced Automated Manual Transmission (AMT). Zeroshift technology is a seamless, instantaneous means of changing gear ratios without interrupting engine torque to the wheels.
